## THE OFFICE OF THE FUTURE IS A PLACE OF COLLABORATION, CREATIVITY AND INTERACTION.

Individual room solutions create exclusivity, show appreciation and lead to greater satisfaction, more creativity and identification with a unique spatial experience. The need to break new ground is a requirement of today's working world.

Movement in the room plays a central role in this. It not only promotes well-being, but also stimulates innovative thought processes.

The vision of WAGNER's new "Moving Spaces" is to enable flexible room solutions that adapt to people's needs and place them at the center of attention.

For us, "bespoke interior system" means designing and planning spaces made to measure individually according to customer requirements, and planning to move organizations forward.

## d2 BESPOKE INTERIOR SYSTEM

With our modular D2 room system, we at WAGNER focus on sustainability. Rooms can change and adapt. Individual pieces are combined to create new furniture. Large pieces are combined to create small pieces of furniture. This creates perfection in sustainability for an inspiring working environment. The highlight of the D2 system is its patented connector.

The individual parts can be joined together without tools. Either made of 100% recyclable cardboard or elegant aluminum, both materials are naturally recyclable and protect the environment. Easy to transport and flexible to use, it adapts to the needs of your rooms. Whether in the office, conference room or home office, the space-creating D2 system creates movement and opens up space.

With the D2 bespoke interior system, you can create a sustainable, complete, made-to-measure interior with minimal materials and lightweight furniture, from walls and shelves to tables and complete furnishing concepts. All elements are simply plugged into each other. No time-consuming assembly is required.

### TAILOR-MADE SOLUTION

The D2 furnishing system offers made-to-measure solutions that are specially tailored to the customer's wishes. This promotes a unique customer experience and enables active co-design, which leads to greater acceptance and identification with the products, the room and the spatial experience.

## d2 PRODUCT FEATURES

### 1. UNIQUE MATERIALITIES

An outstanding feature of D2 is its lightweight construction with an innovative honeycomb structure. This not only contributes to sustainability, but also creates a filigree appearance. Materials such as aluminium (15 mm) and cardboard (20 mm) ensure discreet connections that are ideally invisible and are realized using patented connectors, resulting in a unique design.

### 2. SIMPLE AND TOOL-FREE INSTALLATION

Since no adhesives or screws are used, but everything is plugged in, easy handling without tools is guaranteed. Assembly is therefore tool-free, so that the elements can also be easily dismantled and reused, which also improves their ecological balance.

### 3. EASY HANDLING

The system is easy to assemble and dismantle and can be stored and shipped flat. This significantly reduces assembly and transportation costs. In addition, the components can be separated by type, can be dismantled and are therefore 100% recyclable, which highlights the system's sustainability.

Another advantage lies in the simple planning and production processes of a complete solution that offers confidence - with guaranteed design quality down to the last detail, as developed by Gonzalez Haase AAS & Diez Office.

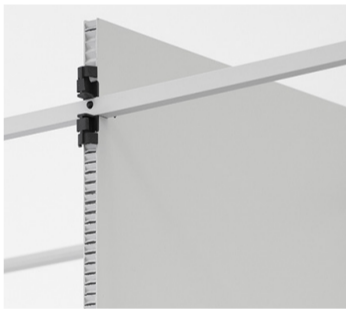

**D2 ENABLES THE CREATION OF UNIQUE ROOM CONCEPTS, WHICH ARE MANUFACTURED ENTIRELY ACCORDING TO CUSTOMER REQUIREMENTS. THIS ACHIEVES A HIGH LEVEL OF ROOM QUALITY AND INDIVIDUALITY.**

### ADVANTAGES FOR D2 PLANNERS

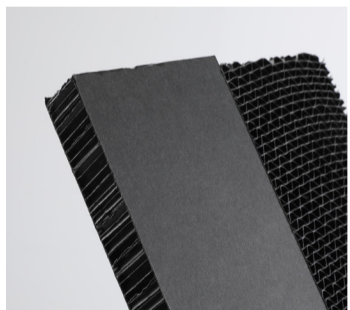

As a certified D2 planner, you benefit from a high degree of planning freedom. The warranty lies with WAGNER and you can rely on our product guarantee. Our guaranteed design quality, reliable production and delivery process offer you security.

## d2 APPLICATION EXAMPLES

### 1. PLANNING

Planning with the D2 bespoke interior system is carried out by a certified D2 planner or by WAGNER.

### 2. OFFER

This is followed by the examination and preparation of the offer by WAGNER.

### 3. CREATION OF CAD DATA

After the creation of CAD data by WAGNER, planning is finalized.

### 4. ORDER

The customer orders via the certified D2 planner or WAGNER.

### 5. DELIVERY AND ASSEMBLY

Delivery is carried out by WAGNER and its partners. The Wagner project team is responsible for delivery and installation on site.
